ELIAN VOSS

SOFTWARE ENGINEER | BACKEND & PLATFORM

Larkhaven, North Vale (fictional) | elian.voss@example.invalid | portfolio.example.invalid/evoss

PROFESSIONAL PROFILE

Software engineer with 7+ years designing reliable services, developer tooling, and data-intensive applications. Comfortable owning services from architecture and implementation to production monitoring and incident review. Enjoys mentoring teams and improving delivery practices.

TECHNICAL SKILLS

Languages

TypeScript, Python, Go, SQL, JavaScript

Backend

Node.js, FastAPI, REST, GraphQL, event-driven systems

Data & infrastructure

PostgreSQL, Redis, Kafka, Docker, Kubernetes, Terraform

Quality & operations

GitHub Actions, OpenTelemetry, unit/integration testing, CI/CD

PROFESSIONAL EXPERIENCE

Senior Software Engineer

2023 - Present

Pineglass Systems (fictional) | Larkhaven

- Designed a multi-tenant API platform handling simulated usage peaks of 2.4 million events per day, with clear isolation and quota controls.
- Led a gradual migration of three monolithic workflows into independently deployable services, reducing release coordination.
- Introduced traces, service-level indicators, and runbooks that cut the team's average diagnostic time in internal incident exercises by 35%.
- Mentored four engineers and led architecture reviews, emphasizing maintainability, security, and practical trade-offs.

Software Engineer

2020 - 2023

Asterbyte Labs (fictional) | Briar Quay

- Built Python and TypeScript services for a fictional logistics analytics suite, including scheduled pipelines and customer-facing reporting.
- Optimized frequently used PostgreSQL queries, improving benchmark response times by approximately 40%.
- Implemented automated contract tests for external integrations and a repeatable deployment pipeline.

ELIAN VOSS

SOFTWARE ENGINEER | BACKEND & PLATFORM

Larkhaven, North Vale (fictional) | elian.voss@example.invalid | portfolio.example.invalid/evoss

EARLIER EXPERIENCE

Junior Software Engineer

2018 - 2020

Cloudfern Digital (fictional) | Westmere

- Created internal dashboards and REST endpoints for a fictional subscription management product.
- Worked with designers and support analysts to convert feedback into testable product changes.
- Contributed documentation and code reviews that improved onboarding consistency for new teammates.

SELECTED PROJECTS

Streamwatch - Service Observability Toolkit

Personal sandbox project: a Go-based metrics collector with a web interface for exploring service health and synthetic test traffic.

Parcelgraph - Event Processing Demonstrator

Prototype illustrating idempotent Kafka consumers, retry queues, and operational dashboards using entirely generated parcel events.

EDUCATION

B.Sc. in Computer Science

North Vale Institute of Technology (fictional) | 2014 - 2018

PROFESSIONAL DEVELOPMENT

- Distributed Systems Design Workshop - internal training, 2024
- Practical Cloud Security - fictional learning program, 2022
- Technical Mentorship Circle - participant and session facilitator, 2021-2023

COLLABORATION & WORKING STYLE

Approach: write down assumptions, prototype difficult integrations early, invest in observability, and keep interfaces easy to understand. Experienced with asynchronous teams, cross-functional planning, and constructive code review.

ADDITIONAL INFORMATION

Languages: English (fluent), Valean (fictional, conversational). Interests: developer experience, accessible software, cycling, and community tech workshops. References available upon request; all names, organizations, locations, projects, and achievements in this resume are invented.
